Spare jaw for non-insulated terminals for 428/4AG

Spare jaw for cord end terminals for 428/4AG

Frequently asked questions

Why is it necessary to use crimping pliers for cable connections? Why not simply use combination pliers?

When working with cable connections, you must use crimping pliers because this is the only way to press the connections together correctly and accurately. This is a requirement for the safety of the joints and provided for by the grooves/shapes on the pliers.
