Usage (pictures)

Move impact screwdriver closer to screw, which we will tighten (R), or loosen (L)

L is showing screw loosening.

R is showing screw tightening.

When tightening or loosening the screw, tool has to be placed in a position perpendicular to the screw!

Move tool closer to screw, and don't press it to final position before use. With hammer strike, tool is automatically extracted and tightening/loosening begins.

When the tool is in the compressed position, and we strike it with hammer inner mechanism will get destroyed. Never strike tool with hammer, when the tool is in compressed position!

When the tool is properly positioned on the screw, tap the tool holder with hammer. This will trigger mechanism that allows bolt tightening/loosening for approx. 15°.
