## Upotreba (slike)

## Pravilna upotreba

- Use a screw holding screwdriver to get screws started in awkward, hard-to-reach areas.
- Use a stubby screwdriver in close quarters where a conventional screwdriver cannot be used.
- A rounded tip should be redressed with a file; make sure edges are straight.
- Screwdrivers used in the shop are best stored in a rack. This way, the proper selection of the right screwdriver can be quickly made.
- Keep the screwdriver handle clean; a greasy handle is apt to cause accidents.
- A screwdriver should never be used as pry bar. If it is overstressed in this manner, the blade might break and send a particle of steel into the operator's arm or even towards his eyes.

- Don't use pliers on the handle of a screwdriver to get extra turning power. A wrench should only be used on the square shank or bolster of a screwdriver that is especially designed for that purpose.
- Don't expose a screwdriver blade to excessive heat as it may reduce the hardness of the blade.
- Don't use a screwdriver with a split or broken handle.
- Don't use a regular screwdriver to check a storage battery or to determine if an electrical circuit is live.

## Najčešće postavljana pitanja

**Da li se izolovani VDE alati smatraju ličnom zaštitnom opremom PPE?**

Prema propisima EU, VDE alati se ne smatraju zaštitnom opremom PPE.

**Da li se VDE alati testiraju samo na osnovu uzoraka u serijskoj proizvodnji?**

Test visokog napona (pri 10 kV) se u potpunosti izvodi na svakom alatu. Ostala ispitivanja se vrše u skladu sa standardom EN60900.
