Safety tips

\checkmark

• Pliers should be oiled regularly. A drop of oil at the hinge will lengthen the tool life and assure easy operation.

• When cutting wire with pliers, you should always wear glasses or goggles.

• Handles are provided for comfort. They are not intended to give user any degree of protection against electric shocks and should never be used on live electric circuits.

• Don't use pliers for cutting hardened wire, unless specifically manufactured for this purpose.

• Don't expose pliers to excessive heat. This may ruin the tool.

• Don't use pliers as a hammer.

• Don't hammer on the handles. They may crack or break.

• Don't extend the length of plier handles to secure greater leverage.

• Don't use pliers on nuts or bolts. A wrench will do a better job and with less risk of damage to the fastener.
