Safety tips

● Use a screw holding screwdriver to get screws started in awkward, hard-to-reach areas.

● Use a stubby screwdriver in close quarters where a conventional screwdriver cannot be used.

● A rounded tip should be redressed with a file; make sure edges are straight.

● Screwdrivers used in the shop are best stored in a rack. This way, the proper

● Don't use pliers on the handle of a screwdriver to get extra turning power. A wrench should only be used on the square shank or bolster of a screwdriver that is especially designed for that purpose.

● Don't expose a screwdriver blade to excessive heat as it may reduce the hardness of the blade.

● Don't use a screwdriver with a split or broken handle.

selection of the right screwdriver can be quickly made.

● Keep the screwdriver handle clean; a greasy handle is apt to cause accidents.

● A screwdriver should never be used as pry bar. If it is overstressed in this manner, the blade might break and send a particle of steel into the operator's arm or even towards his eyes.

● VDE tools that have several parts, have to be assembled correctly before use.

● When working with VDE tools avoid contact with water.

● Don't use a regular screwdriver to check a storage battery or to determine if an electrical circuit is live.

● Don't use tools that shows sign of wear and have the second layer of plastic visible.
