

Compressor for shock absorber springs, light version

Hidden

2052/4

Profiles

Product features

- intended for the removal of car shock absorbers.
- the maximum load for the tool is up to 11000N

- UNIOR is already selling a suspension compressor for shock absorber springs (No. 2051), however, many smaller car repair shops do not need to use such a professional tool on a regular basis. This is where the light version comes in - it functions the same as the tool under art. No 2051, but has recommended load for the tool 2750 N. To prevent any bending and the springs falling out of the cups, this tool features a safeguard that enables the parts of the tool used for removing to always operate in parallel.
