# Cable housing cutters

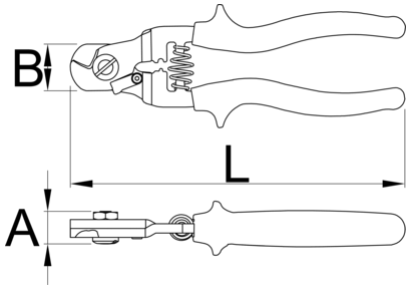

584/4BI-US

## Profiles

## Product features

- Pliers developed specially for cutting shift and break housing. Pliers cut precise and smooth without deformation to the cable housing and feature a build in crimping function for cable end caps. Locking mechanism keeps pliers closed for the easier storing. To unlock the locking mechanism simply squeeze and release the pliers.
- In order to preserve the ultimate cutting performance, we highly advice not to use pliers for cutting shift/brake wires and spokes.
