Safety tips

● Lock all your drawers before trying to roll the tool carriage into a new work area.

● Set the brakes on the locking casters after you have rolled the cabinet to your work area.

● Treat you tool carriage, tool chests, or tool boxes with respect.

● Always follow the prescribed max load capacity of individual drawers and the carriage as a whole.

● Always put heavier objects in the bottom drawers

● Always close drawers when not in use.

● Always follow manufacturer manual instructions regarding assembly and repair of your tools.

● Don't open two or more drawers at the same time, there is high chance of it tipping over.

● Don't throw tools into drawer, always put the tools in.

● Don't use an opened drawer as a working surface.

● Don't clean a lacquered surface with a solvent cleaner.

● Don't pull a tool carriage as you won't be able to see where you are headed. Push it in front of you so you can see where you are going.

● Don't stack a tool carriage with too many extra chests or tool trays; it may tip over at the most unexpected time.

● Don't roll a tool carriage with loose tools or parts on top of the carriage.

● Don't roll a tool carriage too quickly; a pot hole in the floor or some hardware on the floor may cause an accident.

● Don't overload the drawers; if you haven't got room for all of your tools, you need a larger tool carriage.

● Don't open up too many loaded drawers at a time; close each drawer before opening up another. Heavily loaded opened drawers are an invitation to tipping.
